

# Cybersecurity Incident Report

## **Section 1: Identify the type of attack that may have caused this network interruption**

The type of attack the company website is experiencing is a SYN-flooding attack; as the log shows the malicious actor is exhausting the server's connections by overloading it with TCP request from the seemingly approved IP Address (203.0.113.0).

## **Section 2: Explain how the attack is causing the website to malfunction**

The server is rendered unresponsive to the legitimate site traffic due to the constant flood of incomplete requests the malicious actor is making.
